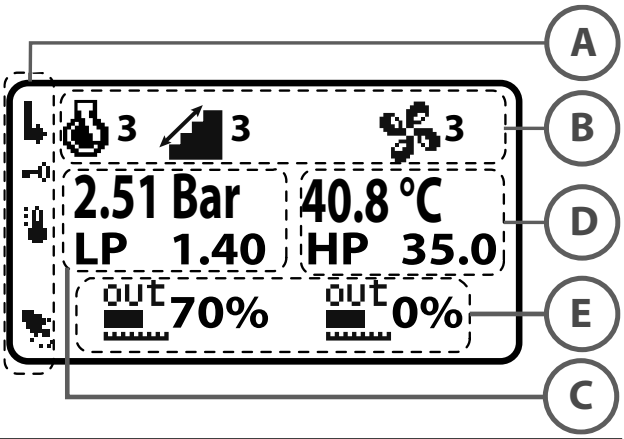
	no alarm	Alarm active (at least one)	alarm acknowl-edgement
PRG	Main menu	-	Parameters Menu User / Installer Service Menu
$	Economy function off	Economy function on	forcing setpoint

DISPLAY OF Compressor rack STATE

The LCD display displays values monitored, machine status and operating modes, as well as configuring the best parameters for the machine itself. The Main Menu has 5 sections:

A	Access to menus		B	Compressors/Fans DIGITAL
	F1	Compressors/Fans		**Compressors** + number of active compressors
	F2	if keypad locked		**power steps Compressors on** + number of active compressors
	F3	Alarms		**Digital fans** + the number of digital fans on



C	LP suction	D	HP Discharge
	• the first number indicates the value read by the suction probe • the second number indicates the value of the suction set		• the first number indicates the value read by the discharge probe • the second number indicates the value of the discharge set
E	**INVERTER compressors**	**E**	**INVERTER fans**
out	INVERTER output use percentage	out	INVERTER output use percentage

Note. Section E. the percentage is only indicated by the number %: the icon does not identify the power supplied or is the same for all percentages.

COMPRESSORS / FANS

	F1	Suction circuit 1	Digital fans discharge
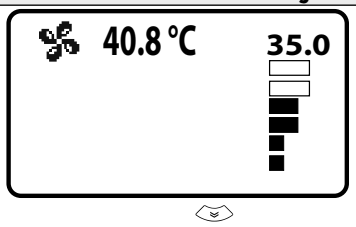
	→				Suction circuit 2	**INVERTER fan discharge**
			


compressor on compressor called compressor off segmentation

VIEWING PROBE VALUES

The Probes Menu only allows you to view the analogue input values.

Access to the Probes Menu takes place via the Main Display by pressing and holding down the function key DX

		Pressure transducers PB1 Pb2 Pb3 > Bar and PSI	Temperature probes PB5 Pb6 Pb7 Pb8 > °C and °F

	QUICKSTART						
501-tyPE	Type of plant: **0 =** standard type compressor rack **1 =** compressor rack with common single discharge discharge **2 =** chiller. The same as case **0**. In this case regulation is in temperature (referred to water) N.B.: If **501 - tyPE = 1** the **Compressor** [2] folder parameters will be visible	0 ... 2	0	num	●	●	●
502-PC1	Compressor 1 power or number of compressor 1 steps	1 ... 255	1	num	●	●	●
503-PC2	Compressor 2 power or number of compressor 2 steps	1 ... 255	1	num			
504-PC3	Compressor 3 power or number of compressor 3 steps	1 ... 255	1	num			
505-PC4	Compressor 4 power or number of compressor 4 steps	1 ... 255	1	num			
506-PC5	Compressor 5 power or number of compressor 5 steps	1 ... 255	1	num			
507-PC6	Compressor 6 power or number of compressor 6 steps	1 ... 255	1	num			
508-PC7	Compressor 7 power or number of compressor 7 steps	1 ... 255	1	num			
509-PC8	Compressor 8 power or number of compressor 8 steps	1 ... 255	1	num			
510-PC9	Compressor 9 power or number of compressor 9 steps	1 ... 255	1	num			
511-PC10	Compressor 10 power or number of compressor 10 steps	1 ... 255	1	num			
512-PC11	Compressor 11 poweror number of compressor 11 steps	1 ... 255	1	num			
513-PC12	Compressor 12 power or number of compressor 12 steps	1 ... 255	1	num			
514-EAAL	Enable cumulative alarms digital output It defines whether to assign the cumulative alarm automatically to a digital output on relay. **0=** No; **1=** Yes	0 ... 1	1	flag	●	●	●
515-EACI	Compressor INVERTER enabling digital output. Defines whether to automatically assign the INVERTER compressor 1 and 2 to the analogue outputs. **0=** No; **1=** Yes	0 ... 1	0	flag	●	●	●
516-EAFi	Fan INVERTER enabling digital output. Defines whether to assign the INVERTER fan automatically to an analogue output. **0=** No; **1=** Yes	0 ... 1	0	flag	●	●	●
517-EACIE	Compressor INVERTER 1 and 2 error digital input. Defines whether to automatically assign the INVERTER compressor 1 and 2 error signal to the digital inputs. **0=** No; **1=** Yes	0 ... 1	0	flag	●	●	●
518-EAFiE	Fan INVERTER error digital input. Defines whether to automatically assign the INVERTER fan error signal to a digital input. **0=** No; **1=** Yes	0 ... 1	0	flag	●	●	●
519-EAgA	Enable generic alarm digital input. Defines whether to assign the generic alarm automatically to a digital input. **0=** No; **1=** Yes	0 ... 1	0	flag	●	●	●
520-Fnty	Fan mode 0= **disabled** condensation control disabled; 1= **inverter** control through INVERTER (only analogue) 2= **digital** control through relay 3= **inverter+backup** control with INVERTER (only analogue) with backup relay 4= **digital+inverter** control by relay + INVERTER 5= **dig+inv+backup** control by relay + INVERTER with backup relay	0 ... 5	2	num	●	●	●
521-nFn	Number of fans	1 ... 8	3 **9900** 3 **9100** 1 **8900**	num	●	●	●
522-CtyP	Circuit 1 Type 0= **homogeneous** digital control by relay (HOMOGENEOUS STEPS) 1= **not homogeneous** digital control by relay (NON HOMOGENEOUS STEPS) 2 =**homogeneous+inverter** control by relay (HOMOGENEOUS STEPS) + INVERTER 3= **hom+inv+backup** control by relay (HOMOGENEOUS STEPS) with backup relay	0 ... 3	2	num	●	●	●
523-CPnU	Number of compressors circuit 1 N.B: 0 value is only allowed if **522-CtyP = 2**. (only INVERTER)	0 ... 12	3 **9900** 3 **9100** 2 **8900**	num	●	●	●
524-CtyP2	Circuit 2 Type - See **522-CtyP**	0 ... 3	0	num	●	●	●
525-CPnU2	Number of compressors circuit 2 N.B: 0 value is only allowed if **524-CtyP2 = 2**. (only INVERTER)	0 ... 12	0	num	●	●	●

PARAMETER TABLE

Pressure/Temperature parameters
Parameters quadrupled [° C, bar, ° F, PSI] according to the Unit of Measure on display.
For example the parameter of the folder
Compressors> Regulation Thresholds >141 – LSE is shown as:

DESCRIPTION	RANGE	DEFAULT	U.M.
141 – LSE minimum setpoint °C.	-100...600	-55.0	°C
141 – LSE minimum setpoint °F.	-150...999.9	-67	°F
141 – LSE minimum setpoint bar.	-1...68	0.62	bar
141 – LSE minimum setpoint PSI.	-14.5...999.9	8.9	PSI

In parameter table it is specified only once (single line)
range, default, and UM in ° C marked as **§**

Temperature parameters
Parameters doubled [° C;° F] according to the Unit of Measure on display.
For example the parameter of the folder
Compressors> Regulation Thresholds >155 – AtdS è visualizzato come:

DESCRIPTION	RANGE	DEFAULT	U.M.
155 – AtdS Ambient temperature dynamic set °C	-100...600	15.0	°C
155 – AtdS Ambient temperature dynamic set °F	-150...999.9	59	°F

In parameter table it is specified only once (single line)
range, default, and UM in ° C marked as **°**

C1	C2	**Regulation/Alarms**						
The parameters 551-Stty, 552-PoLI, 553-SEr, 698-SUPFr are only displayed in the Regulation/Alarms folder and in common for two circuits								
551-Stty		Regulation enabling suction/discharge with set central to the regulation band **0 (No)=** Side set; **1 (Yes)=** Central setpoint.	0 ... 1	1	flag	●	●	●
552-PoLI		Compressor activation policy **0 =** fixed sequence; **1 =** compressor rotation (balancing); **2 =** saturation 1; distribution of resources on smallest number of compressors possible to obtain highest number of compressors turned off. **3 =** saturation 2; same as saturation 1, except that all compressors must reach minimum power level (one step) before starting switch-off.	0 ... 3	2	flag	●	●	●
553-SEr		Compressor max usage time.	0 ... 32000	32000	hours	●	●	●
698-SUPFr		Line frequency. **0=**50Hz; **1=**60Hz	0 ... 1	0	flag	●	●	●
101-CCFn	**201-CCFn**	Compressors control type. Selection of type of compressor control: **0=**Proportional; **1=**Neutral Zone; **2=**PID	0 ... 2	2	num	●	●	●
102-ItEn	**202-ItEn**	Enabling full control **0=**No; **1=**Yes	0 ... 1	1	flag	●	●	●
103-It	**203-It**	Integral time	0.1...90.0	90.0	sec	●	●	●
104-PbEn	**204-PbEn**	Enabling proportional control **0=**No; **1=**Yes	0 ... 1	1	flag	●	●	●
105-dtEn	**205-dtEn**	Enabling derivative control **0=**No; **1=**Yes	0 ... 1	0	flag	●	●	●
106-dt	**206-dt**	Derivative time	0.1...90.0	0.1	sec	●	●	●
107-dSS	**207-dSS**	Dynamic suction set mode. **0=**dynamic set; **1=**fixed set.	0 ... 1	1	flag	●	●	●
108-CPP	**208-CPP**	Enable default power control in case of suction probe error. **0=**No; **1=**Yes	0 ... 1	0	flag	●	●	●
109-PoPr	**209-PoPr**	Default power value in case of suction probe error	0 ... 100	50	%	●	●	●
111-PEn	**211-PEn**	Number of suction pressure switch trips which must occur in the time interval set by the parameter **112-PEI / 212-PEI** so that the alarm goes from automatic to manual. If **= 0** the alarm is always automatic. If **= 33** the alarm is always manual.	0 ... 33	0	num	●	●	●
112-PEI	**212-PEI**	Time interval for the counting of **111-PEn** / **211-PEn**	1 ... 15	15	min	●	●	●
113-byPS	**213-byPS**	Bypass time suction pressure switch trip for high and low pressure	0 ... 999	0	min	●	●	●
118-PtSE	**218-PtSE**	Compressor steps sequence Defines the activation / deactivation sequence of the relays associated with compressor capacity step: **0=**increase power → deactivation capacity step; **1=**increase power → shift capacity step; **2=** increase power → activate capacity step.	0 ... 2	0	num	●	●	●
120-nCPC	**220-nCPC**	Selection Master compressor: that compressor will always be the first one to be turned on and the last one released based on the activation policy (see **552 - PoLI**). **0 =** function disabled.	**0** ... **523 - CPnU** **0** ... **523 - CPnU2**	0	num	●	●	●
128-CRP	**228-CRP**	Digital compressor rated power at network frequency	0 ... 255	100	num	●	●	●

NOTE A Fan block if **ALL** the following conditions occur:
- all plant compressors are in maintenance
- parameter 302 - FACt = Yes (at least one compressor on)
- no alarm or presence of LP Suction Pressure Switch / Maximum Suction Probe alarms only on one of the two circuits not on both

NOTE B Fan block if **ALL** the following conditions occur:
- all plant circuits have an oil level alarm
- parameter 302 - FACt = Yes (at least one compressor on)
- no alarm or presence of LP Suction Pressure Switch / Maximum Suction Probe alarms only on one of the two circuits not on both

(°) Simultaneous tripping of the thermal switches of all digital fans results in a shutdown alarm

RTC Value Error	RTC batt exhausted	Time Bands if blocked	**RTC Value Error** 583 - rtCAE Set date/time
CFR Probe error Plant	measure values off measurement range • probe faulty	configurable regulator disabled	**Configurable regulator probe error** check wiring • replace probe wait for the read temperature value to come back
CFA Probe error Plant	measure values off measurement range • probe faulty	Configurable regulator alarm disabled	**Configurable alarm regulator probe error** check wiring • replace probe wait for the read temperature value to come back
(°) if parameter suitably configured			

TECHNICAL SPECIFICATIONS (EN 60730-2-9)

Classification:	automatic electronic control device (not safety) for temperature control to be incorporated
Mounting:	DIN rail.
Type of action:	1.B
Pollution class:	2
Material class:	IIIa
Over-voltage category:	II
Ball test temperature	75 °C
Nominal pulse voltage:	2500 V
Temperature:	Operation: -5 … +55 °C • Storage: -30 … +85 °C
EWCM EO power supply:	SMPS 100...240 V~ ±10% 50/60 Hz
EWCM EO KEYBOARD power supply:	from power base
EWCM EO consumption:	20 W max
Fire resistance category:	D
Software class:	A
RTC battery life:	Without any external power supply, the clock battery will last 4 days.

MECHANICAL CHARACTERISTICS

Casing:	PC+ABS resin casing, UL94 V-0
EWCM measurements:	**Model 8900 / 9100** 13 DIN Rail • **Model 9900** 18 DIN Rail
EWCM KEYBOARD measurements:	160x96x10 mm (Lxhxd)
Terminals:	removable for 2.5 mm2 cross-section wires.
Connectors:	removable type, pitch 5.08 for 90° insertion
EWCM KEYBOARD	microfit 6-way quick connector, length 3 m max. distance base-keyboard 3 m
Humidity:	Operation / Storage: 10...90 % RH (non-condensing)

ELECTRICAL CONNECTIONS

IMPORTANT! Make sure the appliance is switched off before working on the electrical connections.
All operations must be carried out by qualified personnel.
To ensure proper connections, comply with the following:
- Power supplies other than those specified can seriously damage the system.
- Use cables of suitable section for the terminals used
- Separate (as much as possible) the cables of probes and digital inputs from inductive loads and power connections to prevent electromagnetic interference Do not place the probe cables near other electrical equipment (switches, meters, etc.)
- Make connections as short as possible and do not wind them around electrically connected parts.
- Use shielded cables for the probe connections
- To avoid causing static discharges, do not touch the electronic components on the boards.

For all electrical connections, refer to the wiring diagrams provided. The device is equipped with extractable screw terminals to connect electric cables, the cross-section of which must not exceed 2.5 mm^2 (one wire per terminal for power connections). The relay outputs are voltage free.
Do not exceed the maximum permitted current; for higher loads, use a contactor with sufficient power capacity.
Make certain that the power supply voltage matches the rated voltage of the device.
Probes have no connection polarity and can be extended using a normal bipolar cable (note that the extension of the probes influences the instrument's EMC electromagnetic compatibility: take great care with the wiring). The pressure probes have an insertion polarity which must be observed

SUPERVISION
- connection to TelevisSystem / Modbus RTU remote management systems ➔ through direct RS-485 assisted by an RS485/TTL-RS232 PCInterface converter and suitable software Licence.
- connection to program DeviceManager ➔ parameters fast through BusAdapter and DMI

For the installation of the RS-485 network, refer to the documentation provided.

USB Copy Card
Fit the USB Copy Card TTL side into the slot and up/download the parameters as described in the specific user manual section.
On terminating the procedure, disconnect the USB Copy Card.

RESPONSIBILITY AND RESIDUAL RISKS

ELIWELL CONTROLS SRL declines any liability for damage due to:

- Installation/use other than expressly specified and, in particular, in conflict with the safety prescriptions set down in regulations and/or specified in this document;
- Use on panels that do not provide adequate protection against electric shocks, water or dust in the adopted mounting conditions.
- Use on panels allowing access to dangerous parts without having to use tools.
- Tampering with and/or modification of the product.
- Installation/use on panels that do not comply with statutory laws and regulations.

CONDITIONS OF USE

For safety reasons, the device must be installed and used in accordance with the instructions provided. In particular, parts carrying dangerous voltages must not be accessible under normal conditions. The device must be adequately protected from water and dust with regard to the application, and must only be accessible using tools (with the exception of the front panel). The device is suitable for use in household refrigeration appliances and/or similar equipment and has been tested for safety aspects in accordance with the harmonized European reference standards.

Use not permitted Any use other than that expressly permitted is prohibited. The relay contacts provided are mechanical and subject to failure: any protection devices required by product standards, or suggested by good practice in view of obvious safety requirements, must be installed externally of the controller.

DISCLAIMER

DISPOSAL

The appliance (or the product) must be disposed of separately in compliance with the local standards in force on waste disposal.

IMPORTANT WARNINGS

The availability and access to information is determined by the model in use and the settings made by the Administrator.

The System Administrator is responsible for allowing access to the various Menus for qualified personnel who can install or perform the special maintenance on the product

The product's high configurability level requires a suitable study of the plant and the applications to be able to make the device and the plant work in the best possible way.

For any doubts and/or explanations, please contact the Eliwell technical support Service.

N.B

for further information, description of the regulators and the full list of alarms, please refer to the user manual available on the Eliwell website.
